

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) Method, comprising:
obtaining properties related to at least one of a number of different types of data connections accessible from a mobile terminal device, wherein said at least one data connection can be used by a at least one software application of said mobile terminal device; and
adapting in said mobile terminal device a connectivity configuration of said at least one software application ~~on~~ of said mobile terminal device in accordance with said obtained properties of one of said at least one of a number of different types of data connections accessible from said mobile terminal device, wherein said connectivity configuration relates to a use of said at least one data connection by said software application.
2. (Previously Presented) Method according to claim 1, wherein the only available property comprises the identification of said data connection.
3. (Previously Presented) Method according to claim 1, wherein said properties are obtained when a specific data connection is selected.
4. (Previously Presented) Method according to claim 1, wherein said at least one accessible data connection is a potentially accessible data connection.
5. (Previously Presented) Method according to claim 1, further comprising determining actually accessible data connections, and wherein said properties are obtained during said determination.
6. (Previously Presented) Method according to claim 1, further comprising determining active software applications, and adapting connectivity configurations of said determined active software applications.

7. (Previously Presented) Method according to claim 1, further comprising starting said software application on a mobile terminal device prior to obtaining said properties.
8. (Previously Presented) Method according to claim 1, further comprising detecting a data transfer to be performed by said software application, prior to obtaining said properties.
9. (Previously Presented) Method according to claim 1, further comprising selecting an appropriate data connection.
10. (CANCELED)
11. (CANCELED)
12. (Currently Amended) ~~A Computer program product comprising program code means stored on a computer readable storage medium for carrying out the method of claim 1 when program code of said embedded with a computer program, comprising programming code for: means is run on a mobile terminal device.~~
obtaining properties related to at least one of a number of different types of data connections accessible from a mobile terminal device, wherein said at least one data connection can be used by at least one software application of said mobile terminal device; and
adapting in said mobile terminal device a connectivity configuration of said at least one software application of said mobile terminal device in accordance with said obtained properties of one of said at least one of a number of different types of data connections accessible from said mobile terminal device, wherein said connectivity configuration relates to a use of said at least one data connection by said software application.
13. (Currently Amended) Apparatus, comprising:
means for accessing at least one data connection of a number of different types of data connections;
means for running at least one software application-applications, wherein said at least one data connection can be used by said at least one software application;

means for obtaining properties related to said at least one ~~of a number of different types of data connections accessible by said~~ means for accessing at least one data connection; and

means for adapting in a mobile terminal device a connectivity configuration of said at least one software application according to said obtained properties of one of said at least one ~~of a number of different types of data connections accessible by said~~ means for accessing at least one data connection, wherein said connectivity configuration relates to a use of said at least one data connection by said at least one software application.

14. (Previously Presented) Apparatus according to claim 13, further comprising means for selecting one of said at least one accessible data connections.

15. (CANCELED)

16. (CANCELED)

17. (CANCELED)

18. (CANCELED)

19. (CANCELED)

20. (CANCELED)

21. (Currently Amended) Apparatus, comprising:

a data exchanger configured to access at least one data connection of a number of different types of data connections;

a data processor configured to run at least one software application, wherein said at least one data connection can be used by said at least one software application;

an obtainer configured to obtain properties related to said at least one ~~of a number of different types of data connection connections accessible by said data exchanger~~; and

an adapter configured to adapt in a mobile terminal device a connectivity configuration of at least one software application running on said data processor according to said obtained properties of one of said at least one ~~of a number of different types of data connection~~ connections accessible from said data exchanger, wherein said connectivity configuration relates to a use of said at least one data connection by said at least one software application.

22. (Previously Presented) Apparatus according to claim 21, further comprising a selector configured to select one of said at least one accessible data connections.

23. (Previously Presented) Apparatus according to claim 21, further comprising a storer configured to store said connectivity configuration of said at least one software application for said at least one accessible data connection.

24. (CANCELED)

25. (CANCELED)
